introduction

Firstly, software engineering is an engineering branch concerned with the development of a software product using well-defined scientific principles, techniques and procedures. The result of software engineering is an efficient and reliable software product.

objectives

objectives

The goal of implementing this project is to develop a software environment according to our skills that we learned during our studies in the courses in our specialization in information technology, and also what Dr. Mashael Al-Sulami guided and taught us in the software engineering course.

Project Idea

Go ahead

Tourist guide website

Project name and website: Go ahead

- This project aims to improve the image of tourism In the Kingdom of Saudi Arabia through inspection Public places and their information. One of the problems facing the tourism sector is: Lack of sufficient information about tourism Different regions and cities in one website. we hope that the project will be submitted in An excellent way to improve tourism in Vision 2030

Go ahead

Software Model

The Software model for our project is: Agile Software Development
Agile methodology helps us detect problems that arise during website development and address them before they turn into serious problems.

Agile development is important because it helps to ensure that development teams complete projects on time and within budget.

Go ahead

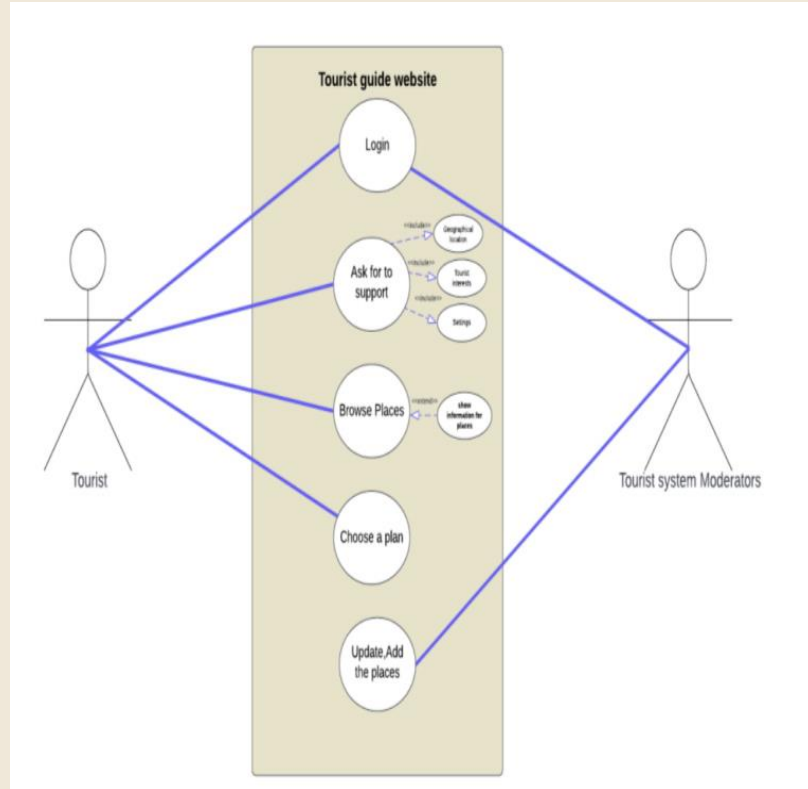

Identify all stages

In this project, work was done on project initiation, project planning, project implementation, project monitoring and control, and project testing. Also working on Digrams described in the software engineering course that explain what the website is and the interactions within it.

Tourism in Saudi Arabia

Your response will help craft unique tourism experiences in Saudi Arabia to explore its vast natural beauty as well as its culture & history .

This survey was created by students Rahaf Al-Malki and Reouf Al-Osaimi for the software engineering subject project website with Dr. Mashael Al-Sulam.

Functional and Non-Functional requirements

Functional Requirements: 1. The user can register after filling all the fields. 2. The user can browse his favorite places through browsing places. 3. Allow the user to write comments and rate them under each one place. 4. The user searches for the appropriate region or city for him. 5. Updated and added local archaeological sites special places for them so that tourists can visit them.

Non-Functional Requirements: 1. Usability requirements 2. Availability requirements 3. Efficiency requirements 4. Reliability requirements

User manual

Some examples

When this button is pressed, the user will be taken to another page where the plans are displayed

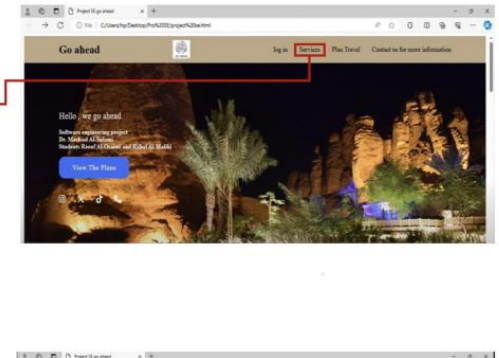

Let's Contact with us

To contact, the mouse will be hovered over the email and it will change from blue to green in order to be clicked

When clicking on services, the user will be taken to a page with a group of services, which is the geographical location, places of tourism, and technical support

Services

Go ahead

Conclusion

In the end, I hope that you will like it, and I hope that we have accomplished the concept of developing a software engineering environment, and I hope for it in the right way, and we dedicate our work and we have accomplished this to Dr. Mashaal Al-Sulami, and we also dedicate it to the College of Computing, and also to our families, and they left us, and in the end, we thank Allah and thank you.

Thanks

Does anyone have any questions?

REUOF and RAHAF | Software Engineering 3279 Dr.Masheal

The languages I used to program our project

"The HyperText Markup Language or HTML is the standard markup language for documents designed to be displayed in a web browser. It defines the meaning and structure of web content. It is often assisted by technologies such as Cascading Style Sheets and scripting languages such as JavaScript"

—HTML

"Cascading Style Sheets is a style sheet language used for describing the presentation of a document written in a markup language such as HTML or XML. CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript."

—CSS

"JavaScript, often abbreviated as JS, is a programming language that is one of the core technologies of the World Wide Web, alongside HTML and CSS!"

—JavaScript And php
